## Guidance Consulting Puts the Spotlight on Health Care Information Security Availability Consulting

*Guidance Consulting announces a new focus on providing information security availability consulting to specific types of organizations. In an effort to provide more cost-effective vulnerability management solutions, the company has broken down its services to help unique companies (ranging from health care centers and software companies to financial institutions) with their unique frameworks.*

SUWANEE, GA (October 01, 2012) – In an effort to increase their scope of services and have an impact on one of the most important fields currently in need of technology support, Guidance Consulting has recently placed a focus on building professional relationships in the health care industry. Successfully building a reputation as corporate leaders is not only an important component of technological support in a hospital or health care center, but patient safety and lives depend on it as well.

Guidance Consulting has gone beyond basic IT support in order to protect their client's data network, as well as provide options of service support in case of increased network usage or disaster.

"When you work in a place as essential as the health care industry, having immediate access to the network is one of the most important parts of both patient safety and security," says Daniel Gottilla, Senior Consultant at Guidance Consulting. "We've gone into our client's computing system to ensure proper security controls protect their information, and have implemented a backup system to ensure that access to their information is guaranteed, even if the network is down."

In rare circumstances, disastrous scenarios related to a company's network may occur. Guidance Consulting guarantees services that maximize the possibilities of keeping everything running smoothly without additional damages. Clients in the health care field can now rely on the security of their information and the reliability of their businesses, even when the unthinkable occurs.

"A number of different types of companies have relied on the information security management services of Guidance Consulting," states Gottilla, "and we're excited to add health care to the mix. There's no other field out there where having good information security controls in place can mean so much."

When the reputation and quality care level of health care centers is at stake, information security is an essential necessity – and Guidance Consulting can provide superior services to uphold it.

**About Guidance Consulting**

Guidance Consulting is a leader in offering a wide range of services related to Information security, technology staffing, and general information technology consulting.

For over 15 years, Guidance Consulting has been delivering profitable technology results to everything from small, private firms to Fortune 500 companies. In addition to meeting vulnerability management, regulatory compliance, IT Governance and staffing needs, Guidance Consulting implements a wide range of IT solutions that help companies cut costs, increase productivity, and avoid damages associated with vulnerability issues to get the most out of the current technologies available for businesses of all sizes.
